SUMMARY

Motivated fresher with a strong foundation in Python, machine learning, and full stack development. Skilled in developing AI-driven projects and eager to gain professional experience through internships or entry-level opportunities in data science and software development.

SKILLS

- ❖ **Programming Languages:** Python, C, C++, HTML, CSS & JavaScript
- ❖ **Frameworks:** TensorFlow, PyTorch & React
- ❖ **Databases:** MySQL & MongoDB
- ❖ **Core Concepts:** Data Structures & Algorithms, Machine Learning, Deep Learning & Data Science
- ❖ **Tools:** GitHub, PowerBI, Tableau, Google Colab, Continuous Integration and Continuous Delivery/Deployment & Jupyter
- ❖ **Soft Skills:** Teamwork, Problem Solving, Creativity, Adaptability & Communication

EDUCATION

- ❖ X (SSC) | Vidya Mandir Prashala, Miraj 88.80% | 2020
- ❖ XII (CBSE) | Anandsagar Public School & Junior College, Tasgoan 74.00% | 2022
- ❖ Computer Science Engineering | Ajeenkya D Y Patil University CGPA: 8.50 | (Aug 2022 – Jun 2026)

EXPERIENCE

- ❖ **JPMorgan Chase Software Engineering Job Simulation:** Developed a Spring Boot microservice integrated with Apache Kafka to process high-volume transactions, implementing validation, persistence with Spring Data JPA (H2 DB), external REST API integration, and reliable workflows through Maven-based testing.
- ❖ **Commonwealth Bank - Introduction to Data Science Job Simulation:** Completed the Commonwealth Bank Introduction to Data Science Virtual Experience (Forage), designing data pipelines, anonymizing sensitive data for privacy compliance, and building a structured database to store and analyze social media interactions

ACADEMIC PROJECTS

- ❖ **InsightPrep – Data Profiler**
Smart web application for CSV data profiling and preprocessing, providing automated feature summaries and quality checks. Includes missing value handling and interactive visualizations to support efficient data analysis and preparation.
- ❖ **RAG Based AI Teaching Assistant**
Built a Retrieval-Augmented Generation (RAG) AI Teaching Assistant using vector databases and LLM pipelines to enhance learning assistance. Designed end-to-end workflow including data ingestion, embedding generation, semantic search, and answer generation with high relevance.
- ❖ **Deepfake Recognition System**
Developed a deep learning–based Deepfake Recognition System capable of detecting manipulated facial videos with high accuracy. Implemented end-to-end data preprocessing, model training, and real-time inference pipeline to classify authentic vs. altered media

CERTIFICATES

- ❖ **Data Science:** Earned a Data Science certification with hands-on training in Python, exploratory data analysis, machine learning algorithms, and real-world project implementation.
- ❖ **Quality Assurance:** Completed a Quality Assurance certification, gaining knowledge of software testing principles, test case design, defect tracking, and ensuring software reliability and quality.

ACHIEVEMENT

- ❖ **Research Publication & Conference Presentation:** Published and presented "Deepfake Recognition System" at ICSICE 2026, demonstrating expertise in Machine Learning, Computer Vision, and AI-based cybersecurity solutions
